Webtrieve™ CoreViewer™

RIGHT SOLUTIONS | RIGHT PARTNER

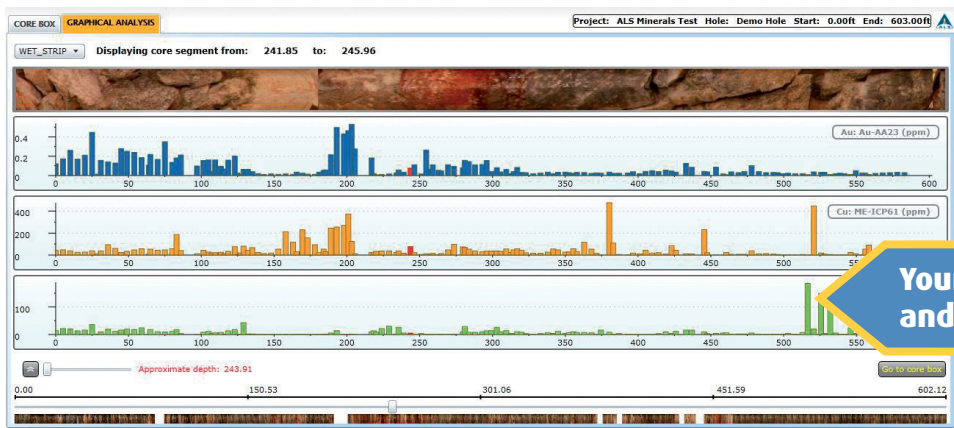

Rapid 3D Ore Model Visualization with Core Data

ALS Webtrieve™ can interface directly with Leapfrog, Maptek's Vulcan™ and Micromine 3D ore model software.

Users of Leapfrog, Maptek's Vulcan™ and Micromine 3D mine planning and geological modeling software can now access core images and geochemistry directly in their 3D geological mode, simply by clicking at any point on a drill hole in the model.

Seamless integration of ALS Webtrieve™ and 3D ore model software offers a user many distinct benefits. The software users can view source information as part of their ore body model, quickly visualize core data in 3D. This speeds interpretation, aids collaboration and provides rapid validation for geological and engineering decisions in the complex mine planning and design process.

This cloud-based technology allows users to securely access stored data remotely where web access is available.
