

ALS Minerals is pleased to announce the opening of the new Core Services Laboratory in Malå, Sweden.

ALS is pleased to announce the formal opening of its purpose built Core Services Laboratory in Malå Sweden. This new ALS laboratory is situated in near proximity to the SGU National Drill Core Archive at a distance of approximately 400m. By this establishment, ALS's commitment to support the mining and exploration sector will be reinforced by providing various services such as Core Sawing, Specific Gravity and Core Photography as well as rental space for Core Logging.

The facility offers roller tables equipped with full spectrum lighting in a clean, new, fresh laboratory environment for your core logging. Electrical pallet lifters, office desk and wireless internet access are available at your disposal. The laboratory also provides you access to changing rooms and the possibility to wash the days grime off at the end of a hard day core logging. We also have a small lunch room with a fully functional kitchen with coffee and tea on hand.

The building is secured from unauthorized access and will be manned at all times during working hours. If needed, arrangements to enable core logging to be done outside of normal working hours can be made. If transport of drill core from the SGU National Drill Core Archive to the laboratory is required, this can be easily organized by the local ALS team.

Our Core Photography services include the taking of high resolution photos of core boxes and our CoreViewer™ services.

Our state of the art core saw which is totally enclosed and thus very safe will be used to cut core which can be transported to the full sample preparation laboratory in Piteå for further preparation prior to assaying. All samples will of course be traceable throughout the process via our Webtrieve™ system. The remaining core can be stored at our facility or we can assist in arranging transport to wherever you wish.

Please don't hesitate to drop by this new facility and discuss how these services can be tailored to meet your requirements. We would be happy to assist you in any way we can.
